1 Guide to Using this Manual

1.1 Image symbols

The meanings of the image symbols on the tool are explained in this manual.

Depending on the model concerned, the following image symbols may be on your machine.

Fuel tank; fuel mixture of gasoline and engine oil

Operate manual fuel pump

This symbol shows the minimum and maximum permissible ethanol content in the gasoline. The gasoline must be mixed with two-stroke engine oil.

1.2 Symbols in text

WARNING

Warning where there is a risk of an accident or personal injury or serious damage to property.

NOTICE

Caution where there is a risk of damaging the machine or its individual components.

1.3 Engineering improvements

STIHL's philosophy is to continually improve all of its products. For this reason we may modify the design, engineering and appearance of our products periodically.

Therefore, some changes, modifications and improvements may not be covered in this manual.

2 Safety Precautions and Working Techniques

Special safety precautions are necessary when operating a machine.

Before commissioning, it is important to read and understand the User Manual and to keep it in a safe place for future reference. Failure to observe the User Manual may lead to serious or even fatal injury.

Comply with all applicable local safety regulations, e.g., by employers' liability insurance associations, social insurance systems, occupational safety authorities, etc.

If you have not used this machine before: Have your dealer or other experienced user show you how to handle your machine safely or attend a specialist course.

Minors must never work with the machine – except for young people over the age of 16 who are being trained under supervision.

Children, animals and onlookers must not be allowed near the machine.

When the machine is not in use, put it in a place where it does not endanger others. Secure the machine against unauthorized access.

The user is responsible for accidents or risks involving other persons or their property.

The machine should only be provided or loaned to people familiar with this model and its operation. The instruction manual should always be handed over with the machine.

The use of noise-emitting power tools may be restricted to certain times by national or local regulations.

Do not operate the machine if any of its components are damaged.

Do not use a high-pressure washer to clean the power tool. The solid jet of water may damage parts of the unit.

2.1 Accessories and spare parts

Only use parts and accessories that are explicitly approved for this power tool by STIHL or are technically identical. If you have any questions in this respect, consult your dealer. Use only high quality parts and accessories in order to avoid the risk of accidents and damage to the machine. In order to avoid the risk of accidents and damage to the machine. Otherwise, there is a risk of accidents and damage to the unit.

STIHL recommends the use of original STIHL parts and accessories. They are specifically designed to match the product and meet your performance requirements.

Never attempt to modify your power tool in any way since this may increase the risk of personal injury. STIHL excludes all liability for personal injury and damage to property caused while using unauthorized attachments.

2.2 Physical fitness

To operate the power tool you must be rested, in good physical condition and mental health.

If you have any condition which may be aggravated by strenuous work, check with your doctor before operating a power tool.

If you have a pacemaker: The ignition system of your machine produces an electromagnetic field of very low intensity. This field may interfere with some pacemakers. To reduce health risks, STIHL recommends that persons with pacemakers consult their physician and the pacemaker manufacturer before operating this tool.

Do not operate the power tool if you have consumed alcohol or taken medication which may impair responsiveness, or taken drugs.

2.3 Intended Use

The blower is designed for blow-sweeping leaves, grass, paper and similar materials, e.g. in gardens, sports stadiums, car parks and driveways. It is also suitable for blow-sweeping forest paths.

The vacuum shredder is designed for picking up dry leaves and other lightweight, loose and non-combustible materials.

Do not blow-sweep or vacuum hazardous materials.

Do not use the power tool for any other purpose because of the increased risk of accidents and damage to the power tool itself. The product must not be modified in any way - this may also lead to accidents or damage to the unit.

2.4 Clothing and equipment

Wear proper protective clothing and equipment.

Clothing must be sturdy but allow complete freedom of movement. Wear snug-fitting clothing, an overall and jacket combination, do not wear a work coat.

Avoid wearing any clothing, scarves, neckties or jewelry which could get into the air intake. Tie up and secure long hair above your shoulders.

Wear sturdy shoes with non-slip soles.

WARNING

To reduce the risk of eye injuries, wear close-fitting safety glasses in accordance with European standard EN 166, EN ISO 16321. Make sure the safety glasses fit snugly.

Wear "personal" sound protection, e.g., ear defenders.

STIHL offers a comprehensive range of personal protective equipment.

2.5 Transporting the unit

Always stop the engine.

Transporting in a vehicle:

- Secure the machine against overturning, damage and fuel spillage

2.6 Refueling

Gasoline is extremely flammable – keep it away from naked flames – do not spill any fuel – no smoking.

Always **shut off the engine** before refueling.

Do not fuel a hot engine – **fuel may spill and cause a fire.**

Open the fuel cap carefully to allow any pressure build-up in the tank to release slowly and to prevent fuel spraying out.

Only refuel the machine in a well ventilated place. If you spill fuel, wipe the machine immediately – if fuel gets on your clothing, change immediately.

Check for fuel leakage! Never start the engine if fuel has been spilled or is leaking – **fatal burns may result!**

After fueling, tighten down the screw-type fuel cap as securely as possible.

This helps reduce the risk of unit vibrations causing an incorrectly tightened fuel cap to loosen or come off and spill quantities of fuel.

2.7 Before starting

Check that your machine is properly assembled and in good condition – refer to appropriate chapters in the instruction manual:

- Check the fuel system for leaks, especially the visible parts, e. g., fuel cap, hose connections, manual fuel pump (only in machines with a manual fuel pump). In case of leakage and damage, do not start the engine – **risk of fire!** Have the machine serviced by a dealer before using it
- The throttle trigger must move freely and spring back by itself to the idle position.
- Setting lever/switch must move easily to **STOP** or **0**
- Keep the handles dry and clean – free from oil and dirt – this is important for safe control of the machine.
- The blower tubes must be properly assembled
- Check that the spark plug boot is secure – a loose boot may cause sparking that could ignite combustible fumes **and cause a fire!**
- Check the condition of blower wheel and blower housing.

Wear of the blower housing (cracks, nicks, chips) may result in an increased risk of injury from thrown foreign objects. If the blower housing is damaged, consult your dealer – STIHL recommends you contact a STIHL servicing dealer

Never attempt to modify the controls or safety devices.

To reduce the risk of accidents and personal injury, do not operate the unit if it is not in proper condition!

2.8 Starting the engine

Start the engine at least 3 meters from the fueling spot, outdoors only.

Your power tool is designed to be operated by one person only. Do not allow other persons in the work area – even when starting.

Do not drop-start the power tool – start the engine as described in the user manual.

Place the machine on level ground only, ensure that you have a secure footing and hold the machine securely.

As soon as the engine starts, the increasing air flow may eject objects (e.g., stones).

2.9 While working

In the event of impending danger or in an emergency, switch off the engine immediately by moving the setting lever / switch to **STOP** or **0**.

Your power tool is designed to be operated by one person only. Do not allow other persons in the work area.

To reduce the risk of injury from thrown objects, do not allow any other persons within 15 meters of your own position.

This distance must also be maintained in relation to objects (vehicles, window panes) – **risk of property damage!**

Do not direct the air blast towards bystanders or animals since the air flow can blow small objects at great speed – **risk of injury.**

When blow-sweeping and vacuum shredding (in open ground and gardens), watch out for small animals to avoid harming them.

Never leave a running unit unattended.

Take special care in slippery conditions – **damp, snow, ice**, on slopes or uneven ground.

Watch out for obstacles: Be careful of refuse, tree stumps, roots and ditches which could **cause you to trip or stumble**

Do not work on a ladder or in unstable locations.

Be particularly alert and cautious when wearing hearing protection because your ability to hear warnings (shouts, alarms, etc.) is restricted.

Work calmly and carefully – in daylight conditions and only when visibility is good. Proceed with caution, do not put others in danger.

Take breaks when you start getting tired or feeling fatigue – **risk of accidents!**

Mufflers with catalytic converters can become especially hot.

Your power tool produces **toxic exhaust fumes** as soon as the engine is running. These gases may be odorless and invisible and may contain unburned hydrocarbons and benzene. Never run the engine indoors or in poorly ventilated locations, even if your model is equipped with a catalytic converter.

To reduce the risk of **serious or fatal injury from breathing toxic fumes**, ensure proper ventilation when working in trenches, hollows or other confined locations.

Stop work immediately if you start suffering from nausea, headaches, impaired vision (e.g. your field of vision gets smaller), impaired hearing, dizziness, or impaired concentration – these symptoms may possibly be the result of too-high exhaust gas concentration – **Risk of accidents!**

To **reduce the risk of fire**, do not smoke while operating or standing near your power tool. Combustible fuel vapor may escape from the fuel system.

Always wear a dust mask if dust is generated.

Operate your power tool in such a way that it produces a minimum of noise and emissions – do not run the engine unnecessarily, accelerate the engine only when working.

After work, place the machine on a level, non-flammable surface. Do not place the machine near easily flammable materials (e.g. wood chips, bark, dry grass, fuel) – **risk of fire!**

Never attempt to insert objects into the impeller housing through the intake screen or the nozzle. They may be expelled at very high speed by the blower – **risk of injury**.

If there is a noticeable change in running behavior (e.g., higher vibrations), stop work and rectify the cause of the problem.

If the machine was exposed to a load for which it was not designed (e.g., heavy impact or a fall), always check that it is in good condition before continuing work – see also "Before Starting". Check in particular that the fuel system has no

leaks and the safety equipment is fully operative. Do not continue operating your power tool if it is damaged. In case of doubt, contact a STIHL authorized dealer.

2.10 Using the blower

The blower is designed for one-handed operation. The operator must carry the blower with his right hand on the control handle.

Always hold the power tool firmly in your hand.

When blow-sweeping in open terrain and in gardens, look out for small animals.

Work only slowly, moving in a forwards direction – always observe the discharge area of the blower tube – do not move backwards – **risk of tripping!**

WARNING

Operate the machine only with the blower tube completely mounted – **risk of injury!**

The round nozzle is particularly suitable for use on uneven surfaces (e.g. fields and lawns).

The flat nozzle (either included with unit or available as special accessory) produces a broad and powerful airstream at ground level. It can be aimed and controlled very accurately. This nozzle is highly effective for blow-sweeping sawdust, leaves, grass cuttings, etc. on flat surfaces.

2.11 Using the Vacuum Attachment

For specific assembling instructions, see appropriate chapter in this User Manual.

The vacuum attachment is designed for two-handed operation. Hold and operate the unit with your right hand on the control handle and your left hand on the assist handle.

Wear the harness of the catcher bag hanging from one shoulder. Practice setting down the unit together with the catcher bag to remove the unit quickly from your body in case of emergency – **risk of injury!**

WARNING

To reduce the risk of injury, operate your power tool only with a properly mounted suction tube and closed catcher bag.

NOTICE

Vacuuming abrasive material (such as grit, stone chips, etc.) causes the impeller wheel and impel-

ler housing to wear at a rapid rate. This results in a considerable loss of suction power. In such a case you should contact your dealer. STIHL recommends you have this work done by a STIHL servicing dealer.

Take particular care when vacuuming wet leaves since they may block the blower wheel and elbow.

To clear a blockage in the machine:

- Switch off the machine.
- Remove the elbow and suction tube – see "Assembling the Vacuum Shredder".
- Clean the elbow and blower housing.

When vacuuming in open terrain and in gardens, look out for small animals.

To reduce the risk of personal injury from fire, never attempt to pick up hot or burning substances (e.g. smoldering ashes, glowing cigarettes).

To reduce the risk of fatal injury from fire or explosion, never attempt to pick up combustible fluids (e.g. gasoline) or materials soaked in combustible fluids.

Switch off the engine before opening the intake screen. The shield must always be closed and secured when the suction tube is not mounted to **reduce the risk of injury** from contact with rotating components. This can also result in damage to the engine.

2.12 Working Technique

To minimize blowing time, use a rake and broom to loosen dirt particles before you start blowing.

- If necessary, dampen the surface to be cleaned in order to avoid creating too much dust.
- Do not blow particles in the direction of bystanders, in particular in the direction of children, pets, open windows or freshly washed vehicles. Take special care in such situations.
- Remove the blow-swept debris in rubbish bins – do not blow it onto the neighbor's land.
- Operate your power tool at reasonable times only – not early in the morning, late at night or during midday rest periods when people could be disturbed. Observe local rest periods.
- Operate blowers at the lowest engine speed necessary to accomplish the task.
- Check your blower before starting work. Pay special attention to the muffler, air intakes and air filter.

2.13 Vibrations

Prolonged use of the power tool may result in vibration-induced circulation problems in the hands (whitefinger disease).

No general recommendation can be given for the length of usage because it depends on several factors.

The period of usage is prolonged by:

- Keeping your hands warm
- Work breaks

The period of usage is shortened by:

- Any personal tendency to suffer from poor circulation (symptoms: frequently cold fingers, itching).
- Low outside temperatures.
- Gripping force (a tight grip hinders circulation).

Continual and regular users should monitor closely the condition of their hands and fingers. If any of the above symptoms appear (e.g. tingling sensation in fingers), seek medical advice.

2.14 Maintenance and Repairs

Service the machine regularly. Do not attempt any maintenance or repair work not described in the instruction manual. Have all other work performed by a servicing dealer.

STIHL recommends that you have servicing and repair work carried out exclusively by an authorized STIHL servicing dealer. STIHL dealers are regularly given the opportunity to attend training courses and are supplied with the necessary technical information.

Only use high-quality replacement parts in order to avoid the risk of accidents and damage to the machine. If you have any questions in this respect, consult a servicing dealer.

STIHL recommends the use of genuine STIHL replacement parts. They are specifically designed to match your model and meet your performance requirements.

To reduce the risk of injury, **always shut off the engine** before carrying out any maintenance or repairs or cleaning the machine. – Exception: Carburetor and idle speed adjustments.

Do not turn the engine over on the starter with the spark plug boot or spark plug removed since there is otherwise a **risk of fire** from uncontained sparking.

Do not service or store your machine near open flames.

Check the fuel filler cap for leaks at regular intervals.

Use only a spark plug of the type approved by STIHL and make sure it is in good condition – see "Specifications".

Inspect the ignition lead (insulation in good condition, secure connection).

Check the condition of the muffler.

To reduce the **risk of fire and damage to hearing**, do not operate your machine if the muffler is damaged or missing.

Do not touch a hot muffler since **burn injury** will result.

Vibration behavior is influenced by the condition of the AV elements – check the AV elements at regular intervals.

Shut off the engine before rectifying problems.

3 Assembling the Blower

3.1 Mounting the Blower Tube

- ▶ Line up the arrows (1).
- ▶ Position the union nut so that the symbol  is in line with the arrows.
- ▶ Push the blower tube (2) into the fan housing stub (3) as far as stop.

- ▶ Push the union nut (4) over the fan housing stub as far as stop.

- ▶ Rotate the union nut (4) in direction of arrow until symbol  is in line with the arrows – union nut snaps audibly into position.

BG 56, BG 86, SH 56, SH 86

- ▶ Push nozzle (5) onto blower tube (2) as far as lug (6), position (a) (long) or position (b) (short), and rotate nozzle in direction of arrow to lock in position.

BG 66

- ▶ Line up the arrows (1).
- ▶ Position the union nut so that the symbol  is in line with the arrows.
- ▶ Push the blower tube (2) into the fan housing stub (3) as far as stop.

- ▶ Push the union nut (4) over the fan housing stub as far as stop.
- ▶ Rotate the union nut (4) in direction of arrow until symbol  is in line with the arrows – union nut snaps audibly into position.

- ▶ Push nozzle (5) in position (a) onto the blower tube (2) as far as lug (6) and rotate in direction of arrow to lock in position.

3.2 Removing the Blower Tube

- ▶ Shut down the engine.
- ▶ Insert a suitable tool through the opening in the union nut to press down the tab.
- ▶ Rotate the union nut in the direction of the arrow as far as the stop.
- ▶ Remove the blower tube.

4 Assembling the Vacuum Shredder**4.1 Mounting the Elbow**

- ▶ Push the elbow (1) into the catcher bag (2) as far as the mark (smaller arrow).
- ▶ Tighten strap (3) on catcher bag and press down the tab (4).

NOTICE

Make sure the zipper on the catcher bag is closed.

- ▶ Line up the arrows (5).
- ▶ Position the union nut so that the symbol  is in line with the arrows.
- ▶ Push the elbow into the recess in the fan housing stub (6) as far as stop.

- ▶ Push the union nut (7) over the fan housing stub as far as stop.
- ▶ Rotate the union nut (7) in direction of arrow until symbol  is in line with the arrows – union nut snaps audibly into position.

4.2 Assembling the Suction Tube

- ▶ Line up the arrows on the suction tube and extension tube. Push together and lock in position.

4.3 Mounting the Suction Tube

- ▶ Shut down the engine.

- ▶ Insert screwdriver in the tab (1) and press down to disengage the intake screen (2) and then open the intake screen.

- ▶ Line up the arrows (3).
- ▶ Position union nut (5) so that the opening lines up with the arrows (3).
- ▶ Push the suction tube into the fan housing stub (4) as far as stop.
- ▶ Push the union nut (5) over the fan housing stub.

- ▶ Rotate union nut (5) in direction of arrow until it snaps audibly into position.
- ▶ Continue turning the union nut in direction of arrow and tighten it down firmly.

4.4 Removing the Elbow

- ▶ Shut down the engine.

- Insert a suitable tool through the opening in the union nut to press down the tab.
- Rotate the union nut in the direction of the arrow as far as the stop.
- Remove the elbow.

4.5 Removing the Suction Tube

- Shut down the engine.

- Rotate the union nut in the direction of the arrow as far as the stop.
- Insert a suitable tool through the opening in the union nut to press down the tab.
- Continue turning the union nut in the direction of the arrow as far as the next stop.
- Remove the suction tube.
- Close the intake screen and lock it in position.

5 Fuel

The fuel is a mixture of two-stroke engine oil and gasoline in a mixing ratio of 1:50.

The permissible minimum and maximum ethanol content in the gasoline is shown on the product.

WARNING

Avoid direct skin contact with fuel and breathing in of gasoline fumes.

5.1 STIHL MotoMix

For products with the specification E0 - E10: STIHL recommends using STIHL MotoMix. This pre-blended fuel is free of benzene and lead, has a high octane rating and always provides the proper mixing ratio.

STIHL MotoMix uses STIHL HP Ultra two-stroke engine oil for optimum engine life.

MotoMix is not available in all markets.

5.2 Mixing fuel

NOTICE

Unsuitable fuels or a mixing ratio that deviates from the specification can lead to severe engine damage. The engine, seals, fuel lines and fuel tank may be damaged if low-quality gasoline or engine oil is used.

5.2.1 Gasoline

Use only **high-quality gasoline** with an octane rating of at least 90 ROC – leaded or unleaded.

Make sure that the permissible ethanol contents is within the required limits.

5.2.2 Engine oil

If you mix the fuel yourself, use only STIHL two-stroke engine oil or another high-performance engine oil classified as JASO FB, JASO FC, JASO FD, ISO-L-EGB, ISO-L-EGC or ISO-L-EGD.

STIHL specifies STIHL HP Ultra two-stroke engine oil or an equivalent high-performance engine oil in order to maintain emission limits over the machine's service life.

5.2.3 Mixing ratio

with STIHL two-stroke engine oil 1:50; 1:50 = 1 part oil + 50 parts gasoline

5.2.4 Examples

Quantity of gaso- line	STIHL two-stroke engine oil 1:50	
Liters	Liters	(ml)
1	0.02	(20)
5	0.10	(100)
10	0.20	(200)

Quantity of gaso- line Liters	STIHL two-stroke engine oil 1:50 Liters	(ml)
15	0.30	(300)
20	0.40	(400)
25	0.50	(500)

- Pour oil into an approved safety fuel canister first, then add gasoline and mix thoroughly

5.3 Storing fuel mixture

Store in approved safety fuel canisters only in a dry, cool and secure place protected against light and sunlight.

Fuel mixture deteriorates with age – mix only as much as needed for a few weeks. Do not store fuel mixture for longer than 30 days. The fuel mixture can become unusable more quickly if exposed to light, sunlight or low or high temperatures.

STIHL MotoMix however can be stored for up to 5 years without any problems.

- Shake the canister containing the fuel mixture thoroughly before refueling

WARNING

Pressure may have built up in the canister – open it carefully.

- The fuel tank and the canister in which fuel mixture is stored should be cleaned thoroughly from time to time

Residual fuel and the liquid used for cleaning must be disposed of properly in accordance with environmental regulations!

6 Fueling

6.1 Preparations

- Before fueling, clean the filler cap and the area around it to ensure that no dirt falls into the tank.
- Position the machine so that the filler cap is facing up.

STIHL recommends you use the STIHL filler nozzle for fuel (special accessory).

6.2 Fill up with fuel

Take care not to spill fuel while fueling and do not overfill the tank.

- Open the filler cap.
- Fill up with fuel
- Closing the cap

**WARNING**

After fueling, tighten down the filler cap as securely as possible.

6.3 Changing the fuel pickup body

Change the fuel pick up body every year.

- Drain the fuel tank.
- Use a hook to pull the fuel pickup body out of the tank and take it off the hose.
- Push the new pickup body into the hose.
- Place the pickup body in the tank.

7 Starting / Stopping the Engine

7.1 Starting the Engine

- Observe safety precautions.

- Press the manual fuel pump bulb (1) at least five times – even if the bulb is filled with fuel.

7.1.1 Adjusting the setting lever

Only on BG 66 C, BG 86, SH 86

- To start, move the setting lever to the run position I

The setting lever (2) allows the throttle trigger (3) to be locked in any required position during operation.

7.1.2 Adjusting the choke knob

If the engine is cold

- Turn the choke knob to **I**

If the engine is warm

295BA068 KN

- Turn the choke knob to **I**

Also use this setting if the engine has been running but is still cold.

7.1.3 Cranking

296BA006 KN

- Place the unit on the ground so that it is secure.
- Make sure you have a firm footing: Hold the unit firmly with your right hand on the housing and press down.
- Hold the starter grip with your left hand.

Version with ErgoStart

- Pull the starter grip steadily.

Version without ErgoStart

- Pull the starter grip slowly until you feel it engage and then give it a brisk strong pull.

NOTICE

Do not pull out the starter rope all the way – it might otherwise break.

- Do not let the starter grip snap back. Guide it slowly back into the housing so that the starter rope can rewind properly.

7.2 As Soon as Engine Runs

296BA008 KN

- Blip the throttle trigger (3) – the choke knob moves to the run position **I** – the engine returns to idle speed.

7.3 Stopping the Engine**7.3.1 BG 56, BG 66, SH 56**

295BA072 KN

- Move the stop switch to **0** – the engine stops – the stop switch springs back to the on position.

7.3.2 BG 66 C, BG 86, SH 86

- Move the setting lever to **0** – the engine stops – the setting lever springs back to the on position.

7.4 Other Hints on Starting

7.4.1 If the engine stops in position **I** or during acceleration

- Move the choke lever to **II** and continue cranking until the engine runs.

7.4.2 If engine does not start

- Make sure all settings are correct (choke knob, setting lever in run position **I**).
- Repeat the starting procedure.

7.4.3 If fuel tank has been run completely dry and then refueled

- Press the manual fuel pump bulb (1) at least five times – even if the bulb is filled with fuel.
- Now start the engine.

8 Cleaning the Air Filter

Dirty air filters reduce engine power, increase fuel consumption and make starting more difficult.

8.1 Different Air Filters

Different models are equipped with different air filters. The models can be identified by the filter housing and the air filter itself.

8.2 Version with Flat Filter Material

- Turn the filter cover lock (1) counterclockwise to the vertical position.
- Remove the filter cover (2).
- Clean away loose dirt from around the filter.

- Pull off the retainer (3) and take the air filter element (4) out of the filter housing (5).
- Replace the filter element. As a temporary measure you can knock it out on the palm of your hand or blow it out with compressed air – do not wash.

Replace any damaged parts.

8.2.1 Installing the filter element

- Fit the filter (4) in the filter housing (5) and push the retainer (3) into position.
- Refit the filter cover (2) and turn the filter cover lock clockwise to the horizontal position.

8.3 Version with Pleated Filter Material

- Unscrew the filter cover lock (1) counterclockwise.
- Remove the filter cover (2).
- Clean away loose dirt from around the filter.

- Take the air filter (3) out of the filter housing (4).

8.3.1 Cleaning the air filter

- Carefully knock the filter out on the palm of your hand or blow it clear with compressed air from the inside outwards.

In case of stubborn dirt or sticky filter fabric

- Wash the air filter in STIHL special cleaner (special accessory) or a clean, non-flammable solution (e.g. warm soapy water). Rinse the filter from the inside outwards under a jet of water – do not use a pressure washer.
- Dry the filter – do not expose to high temperatures.

8.3.2 Place the filter in position.

- Install the filter element in the filter housing.
- Fit the filter cover and tighten the filter cover lock clockwise.

9 Adjusting the Carburetor

The carburetor has been set at the factory to provide an optimum fuel-air mixture under most operating conditions.

9.1 Adjusting Idle Speed

9.1.1 Engine stops while idling

- Turn the idle speed screw (LA) clockwise until the engine runs smoothly.

10 Spark Plug

- If the engine is down on power, difficult to start or runs poorly at idle speed, first check the spark plug.
- Fit a new spark plug after about 100 operating hours – or sooner if the electrodes are badly eroded. Install only suppressed spark plugs of the type approved by STIHL – see "Specifications".

10.1 Removing the spark plug

- Pull off the spark plug boot (1).
- Unscrew the spark plug.

10.2 Checking the Spark Plug

- Clean dirty spark plug.
- Check electrode gap (A) and readjust if necessary – see "Specifications".
- Rectify the problems which have caused fouling of the spark plug.

Possible causes are:

- Too much oil in fuel mix.
- Dirty air filter.
- Unfavorable running conditions.

**WARNING**

Arcing may occur if the adapter nut (1) is loose or missing. Working in an easily combustible or explosive atmosphere may cause a fire or an explosion. This can result in serious injuries or damage to property.

- Use resistor type spark plugs with a properly tightened adapter nut.

10.3 Installing the spark plug

- Screw the spark plug (3) into the cylinder and fit the boot (2) (press it down firmly).

11 Engine Running Behavior

If engine running behavior is unsatisfactory even though the air filter is clean and the carburetor is properly adjusted, the cause may be the muffler.

Have the muffler checked for contamination (carbonization) by your servicing dealer.

STIHL recommends that you have servicing and repair work carried out exclusively by an authorized STIHL servicing dealer.

12 Storing the Machine

If out of use for periods of about 30 days or longer

- Drain and clean the fuel tank in a well ventilated area.
- Dispose of fuel properly in accordance with local environmental requirements.
- If a manual fuel pump is fitted: Press the manual fuel pump at least 5 times.
- Start the engine and run it at idling speed until it stops
- Thoroughly clean the machine, especially the cylinder fins and air filter.
- Store the machine in a dry and safe location. Keep out of the reach of children and other unauthorized persons

13 Maintenance and Care

The following intervals apply to normal operating conditions only. If your daily working time is longer or operating conditions are difficult (very dusty work area, etc.), shorten the specified intervals accordingly.		before starting work	after finishing work or daily	after each refueling stop	weekly	monthly	every 12 months	if problem	if damaged	if required
Complete machine	Visual inspection (condition, wear, leaks)	x		x						
	Clean		x							
Control handle	Check operation	x		x						
Air filter	Clean							x		x
	Replace								x	x
Manual fuel pump (if fitted)	Check	x								
	Have repaired by servicing dealer ¹⁾								x	
Filter in fuel tank	Check							x		
	Replace filter						x		x	x
Fuel tank	Clean							x		x
Carburetor	Check idle setting	x		x						
	Readjust idle									x
Spark plug	Readjust electrode gap							x		
	Replace after 100 hours of operation									
Spark arresting screen ²⁾ in muffler	Check if installed	x								
	Check or replace ¹⁾						x			
Cooling inlets	Clean									x

14 Minimize Wear and Avoid Damage

Observing the instructions in this manual helps reduce the risk of unnecessary wear and damage to the power tool.

The power tool must be operated, maintained and stored with the due care and attention described in this owner's manual.

The user is responsible for all damage caused by non-observance of the safety precautions, operating and maintenance instructions in this manual. This includes in particular:

¹⁾ STIHL recommends that this work be done by a STIHL servicing dealer.

²⁾ Not in all versions, country-specific

- Alterations or modifications to the product not approved by STIHL.
- Using tools or accessories which are neither approved or suitable for the product or are of a poor quality.
- Using the product for purposes for which it was not designed.
- Using the product for sports or competitive events.
- Consequential damage caused by continuing to use the product with defective components.

14.1 Maintenance Work

All the operations described in the "Maintenance Chart" must be performed on a regular basis. If these maintenance operations cannot be performed by the owner, they should be performed by a servicing dealer.

STIHL recommends that you have servicing and repair work carried out exclusively by an authorized STIHL servicing dealer. STIHL dealers are regularly given the opportunity to attend training courses and are supplied with the necessary technical information.

If these maintenance operations are not carried out as specified, the user assumes responsibility for any damage that may occur. Among other parts, this includes:

- Damage to the engine due to neglect or deficient maintenance (e.g. air and fuel filters), incorrect carburetor adjustment or inadequate cleaning of cooling air inlets (intake ports, cylinder fins).
- Corrosion and other consequential damage resulting from improper storage.
- Damage to the machine resulting from the use of poor quality replacement parts.

14.2 Parts Subject to Wear and Tear

Some parts of the power tool are subject to normal wear and tear even during regular operation in accordance with instructions and, depending on the type and duration of use, have to be replaced in good time. Among other parts, this includes:

- Filters (air, fuel)
- Blower wheel, shredder wheel
- Catcher bag
- Rewind starter
- Spark plug

15 Main Parts

- 1 Setting Lever (BG 66 C, BG 86, SH 86)
- 2 Spark Plug Boot
- 3 Muffler
- 4 Starter Grip
- 5 Idle Speed Screw (LA)
- 6 Manual Fuel Pump
- 7 Choke Knob
- 8 Filter Cover
- 9 Screw - Filter Cover
- 10 Tank Cap
- 11 Fuel Tank
- 12 Handle
- 13 Control Handle
- 14 Stop Switch (BG 56, BG 66, SH 56)
- 15 Throttle Trigger
- 16 Intake Screen
- 17 Union Nut
- 18 Blower Tube (BG 56, BG 86, SH 56)
- 19 Round Nozzle
- 20 Fan Nozzle*
- 21 Suction Tube*
- 22 Elbow*
- 23 Catcher Bag*

24 Blower Tube Silencer (BG 66)**# Serial number**

* Depending on version – special accessory

16 Specifications

16.1 Engine

Single-cylinder two-stroke engine

Displacement: 27.2 cm³

Cylinder bore: 34 mm

Piston stroke: 30 mm

Idle speed: 2500 rpm

Engine power:

BG 56: 0.7 kW (1.0 bhp)

BG 66: 0.6 kW (0.8 bhp)

BG 86: 0.8 kW (1.1 bhp)

SH 56: 0.7 kW (1.0 bhp)

SH 86: 0.8 kW (1.1 bhp)

16.2 Ignition system

Electronic magneto ignition

Spark plug (suppressed): NGK CMR6H, ZK 10
C from STIHL

Electrode gap: 0.5 mm

16.3 Fuel system

All-position diaphragm carburetor with integral fuel pump

Fuel tank capacity:

BG 56: 540 cm³ (0.54 l)

BG 66: 540 cm³ (0.54 l)

BG 66 C: 440 cm³ (0.44 l)

BG 86: 440 cm³ (0.44 l)

SH 56: 540 cm³ (0.54 l)

SH 86: 440 cm³ (0.44 l)

16.4 Blowing capacity

Blowing force (round nozzle)

BG 56: 13 N

BG 66: 10 N

BG 86: 15 N

SH 56: 15 N

SH 86: 15 N

Air speed (blower mode)

Blower mode (round nozzle)

BG 56: 60 m/s

BG 66: 51 m/s

BG 86: 63 m/s

SH 56: 60 m/s

SH 86: 63 m/s

Blower mode (fan nozzle)

BG 56: 70 m/s

BG 86: 74 m/s

Blower mode (fan nozzle)

SH 86: 74 m/s

Air throughput

	Round blower nozzle	flat film extrusion die
BG 56:	700 m ³ /h	560 m ³ /h
BG 66:	630 m ³ /h	---
BG 86:	755 m ³ /h	620 m ³ /h
SH 56:	700 m ³ /h	560 m ³ /h
SH 86:	755 m ³ /h	620 m ³ /h

Maximum air speed (blower mode)

	Round blower nozzle	flat film extrusion die
BG 56:	71 m/s	82 m/s
BG 66:	62 m/s	---
BG 86:	76 m/s	---
SH 56:	71 m/s	---
SH 86:	76 m/s	---

Maximum air flow rate (without blower tube assembly)

BG 56: 730 m³/h

BG 66: 730 m³/h

BG 86: 810 m³/h

SH 56: 730 m³/h

SH 86: 810 m³/h

16.5 Weight

Dry, blower mode

BG 56: 4.1 kg

BG 56 C: 4.1 kg

BG 66 D: 4.5 kg

BG 66 D C: 4.8 kg

BG 86: 4.4 kg

BG 86 C: 4.4 kg

without fuel, suction mode

SH 56: 5.4 kg

SH 56 C: 5.4 kg

SH 86: 5.8 kg

SH 86 C: 5.8 kg

16.6 Noise and vibration values

16.7 REACH

REACH is an EC regulation and stands for the Registration, Evaluation, Authorization and Restriction of Chemical substances.

For information on compliance with the REACH regulation (EC) No. 1907/2006 see

www.stihl.com/reach

16.8 Exhaust Emissions

The CO₂ value measured in the EU type approval procedure is specified at

www.stihl.com/co2

in the product-specific technical data.

The measured CO₂ value was determined on a representative engine in accordance with a standardized test procedure under laboratory conditions and does not represent either an explicit or implied guarantee of the performance of a specific engine.

The applicable exhaust emission requirements are fulfilled by the intended usage and maintenance described in this User Manual. The operating license shall be void if the engine is modified in any way.

17 Maintenance and Repairs

Users of this machine may only carry out the maintenance and service work described in this user manual. All other repairs must be carried out by a servicing dealer.

STIHL recommends that you have servicing and repair work carried out exclusively by an authorized STIHL servicing dealer. STIHL dealers are regularly given the opportunity to attend training

courses and are supplied with the necessary technical information.

When repairing the machine, only use replacement parts which have been approved by STIHL for this power tool or are technically identical. Only use high-quality replacement parts in order to avoid the risk of accidents and damage to the machine.

STIHL recommends the use of original STIHL replacement parts.

Original STIHL parts can be identified by the STIHL part number, the **STIHL**® logo and the STIHL parts symbol  (the symbol may appear alone on small parts).

18 Disposal

Contact the local authorities or your STIHL servicing dealer for information on disposal.

Improper disposal can be harmful to health and pollute the environment.

- Take STIHL products including packaging to a suitable collection point for recycling in accordance with local regulations.
- Do not dispose with domestic waste.

19 EU conformity

The EU Declaration of Conformity is available at stihl.link/compliance.

Further information and a form for reporting security vulnerabilities are available at vdp.stihl.com.
